

Versatile and autonomous

The GEO device is the solution for your company if it uses land or air transport.

Thanks to its small size and weight, GEO is the perfect device for the control of goods in shared transport or short-stay storage, providing access to the location and tracking of your deliveries at all times.

GEO is the definitive solution to monitor your deliveries, both for full cargoes and in the case of grouping systems, providing you with information on the route taken, the stops made, the speed, the opening of doors and temperature.

Whether you work with an external transport company or in-house vehicles, you can find out when deliveries are made and under which conditions, and stay ahead of problems such as delays, the loss of goods, damage due to poor handling and incorrect storage.

GEO simplifies the control of small batch shipments and deliveries with multiple unloading points, as the device is always connected to the merchandise/batch and not to a specific transport vehicle, and it does not require installation or an external power supply.

Renting

Leave everything in our hands! For a fixed monthly fee, you can enjoy all of the services.

The fee includes:
1 GEO device, unlimited national data plan, access to the web application, guarantee of replacement in the event of breakage or technical failure and telephone technical support.

Other products

MOBITRACK

Simple and user-friendly application to monitor all your deliveries and configure the devices associated to your account.

NEMO

The NEMO device is portable and autonomous, perfect for the geolocalisation and tracking of reefers and dry containers. Programmable data reception.

SIMPLY Temp

Single-use disposable card to record the temperature and/or humidity. Data can be downloaded directly to a PC through a USB port.

EASY Temp

Reusable data logger with a screen for instant temperature and/or humidity control. It can be programmed to send alerts through a light alarm of critical points. Data can be downloaded directly to a PC through a USB port.
